

fimma
ESSENTIAL DETAILS

Fimma is the company's original brand. Starting initially as a producer of butter seals, over the years it has developed know-how for the production of small metal parts for the following applications:

FOOTWEAR

CLOTHING

LEATHER GOODS

PAPER CONVERSION

BABYWEAR

BABY TROLLEY

FOOTWEAR

Eyelets, rivets and snap-fasteners are the main products for this sector. New and durable materials are shaped, coated and finished to meet the styling requirements and to ensure quality and durability, a feature of extreme importance in this segment.

PAPER CONVERSION

The paper conversion sector requires precise and durable articles, with what can be considered relatively basic finishing. Considering the large volumes of pieces that are applied automatically, the reliability of the production process is of paramount importance.

CLOTHING

Many products, such as standard snap fasteners, eyelets, rivets and jeans buttons, are produced for this important market sector. Our vast offer allows us to satisfy every type of request relating to the creation of garments.

BABYWEAR

The babywear sector is one of the most delicate ones, whereby every accessory must undergo multiple checks to ensure maximum reliability and child-proof resistance. The products for this market are made with Lead component lower than 40ppm, in accordance with the MRSL list created by Greenpeace.

LEATHER GOODS

The specificity of this sector requires the particular development of snap-fasteners, rivets and eyelets with a long life cycle and which can be perfectly adapted to the different thickness of leather and hides. Specific and stringent technical tests guarantee the quality and durability of our products.

BABY TROLLEY

Providing accessories which ensure maximum safety to customers in this segment is a Must for Fimma. Every single production batch undergoes the most stringent technical-quality tests to guarantee impeccable performance. Fimma has specifically developed an automated quality control system that integrates with the manual controls which are in place.
